

Tabletop Skewering machine KSE-ST18

Still using hands to skewer your satay or yakitori?

Try our Tabletop Skewering machine today.

Skewers your Satay, Yakitori or any on-stick product automatically, but small and space saving.

Description

Design to reduce time and labour compared to skewering by hand.
Capable of reaching up to 900 sticks per hour.

Meat or your product are loaded manually onto the mould tray set which consist of 6 individual moulds. Which is loaded onto the conveyor for skewering.
The system will go through a cycle of skewering 6 pieces and stop, the operator will then remove the skewered tray set and place a un-skewered set onto the conveyor and repeat the process.

Each cycle is approximately 20 seconds, covering loading, skewering and unloading.
Space is often a consideration especially so in high rental times. Hence our Tabletop Skewer machine is designed to be small and compact, easily fitting into any small space. Running on only a single phase electrical supply, the machine can even be

How it works

used at any location.
Mould are customisable according to your product specification.

Features

Precise and fast skewering

Our mould design is fabricate based on your product specification, to ensure the bamboo skewers the product in the center. Skewering in the center is critical to ensure that during the grilling process, the meat when rotated will have even exposure to the heat.

Cooking evenly not only ensures the meat gets cook in a shorter amount of time, it also prevents overcooking. Meat will dry out from overcooking as moisture is lost as the meat shrinks.

Easy to remove & install moulds

Made from food grade material, the moulds are strong and safe.

Easily removed and installed, cleaning is a breeze.

Each set comes with 6 individual moulds for your product.
